**Pushing the limits beyond the borders of today's Internet
&
Creating new requirements for a new Internet**

AI as benchmark to set the borders of a new Internet

*What does it take
to run AI on digital
infrastructure?*

AI Training

Develop the model in the first place, periodic retraining of the model

Transmission technologies

AI model

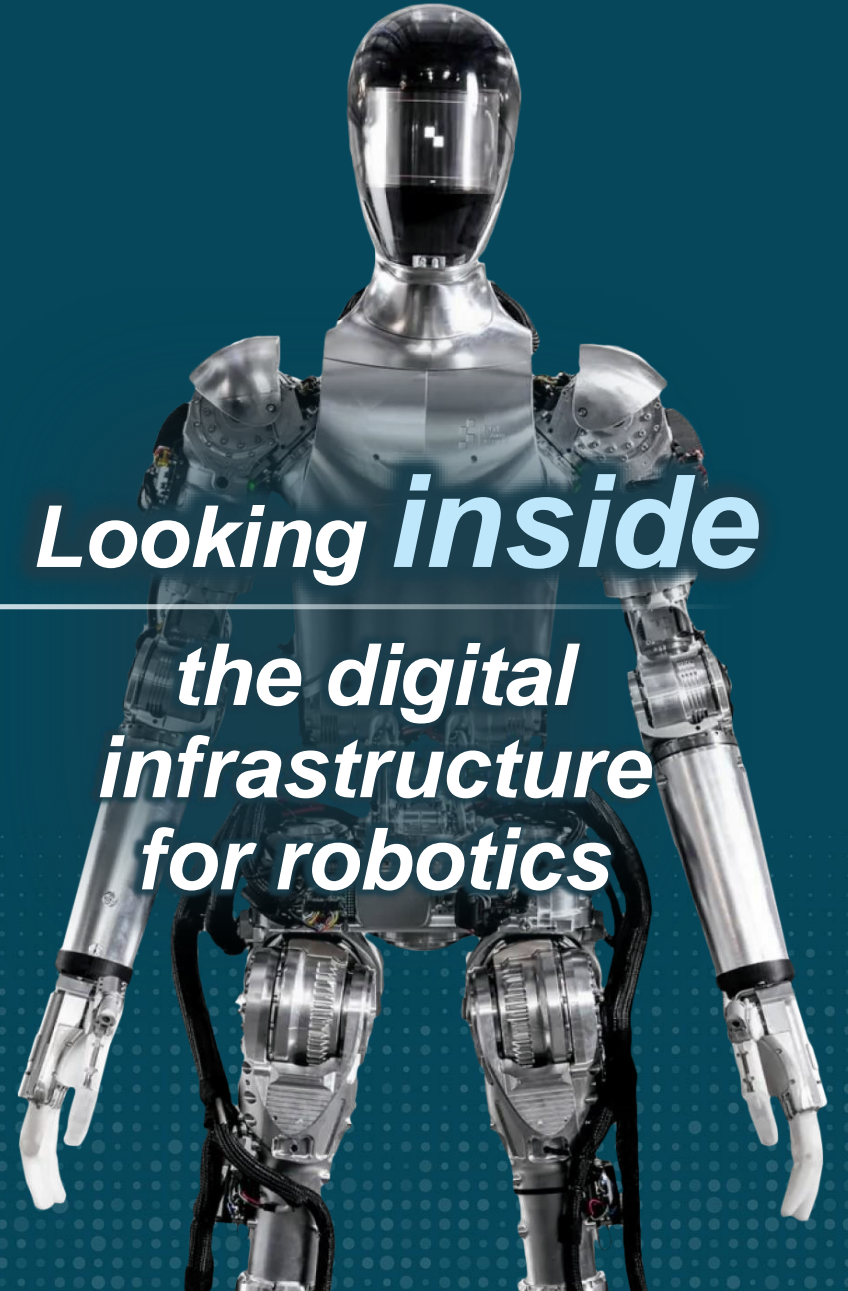

Connected devices

AI Inference ("AI in action")

AI-based diagnostics, simulate, predict, pilot

Looking inside
the digital infrastructure for robotics

Transmission technologies

AI model

Connected devices

DATA JOURNEY

CONTROL THE DATA JOURNEY

Transmission technologies

SIMPLICITY

SECURITY & COMPLIANCE

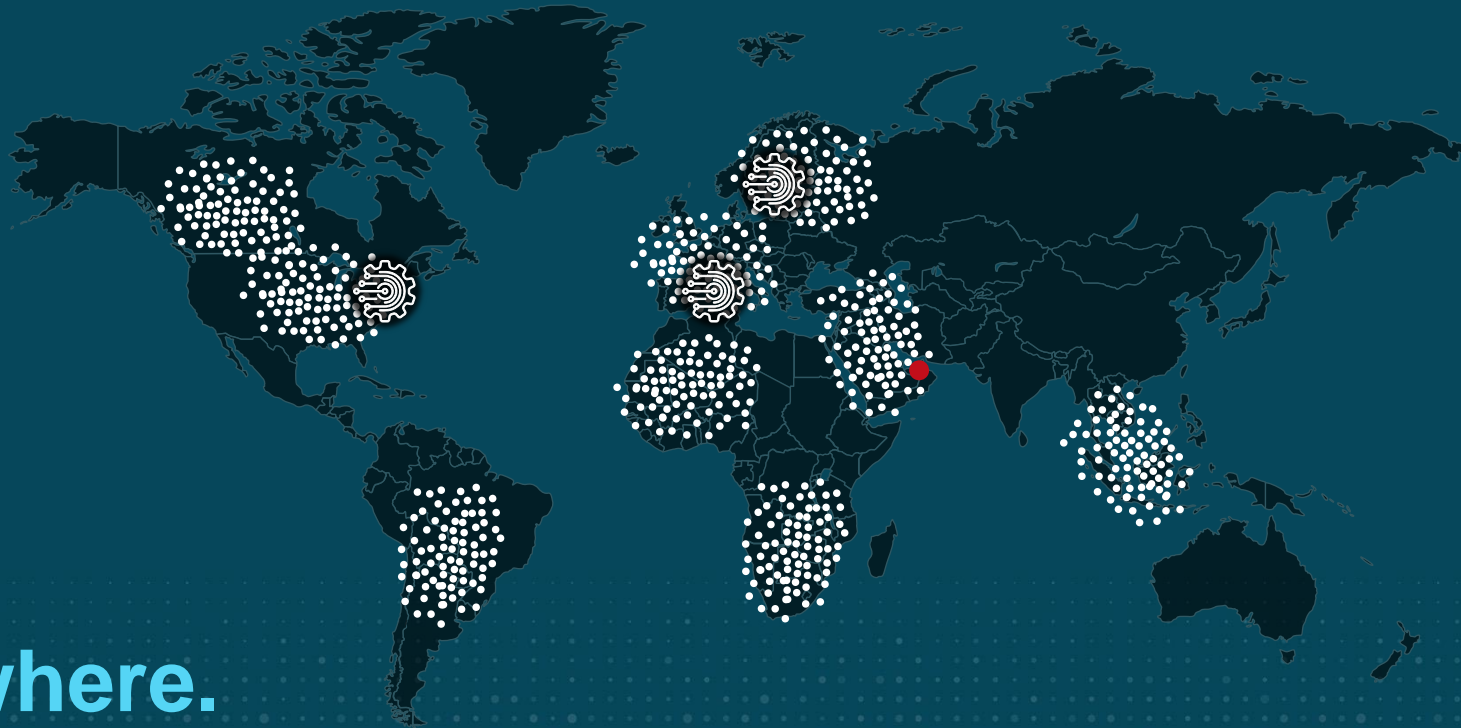

PERFORMANCE

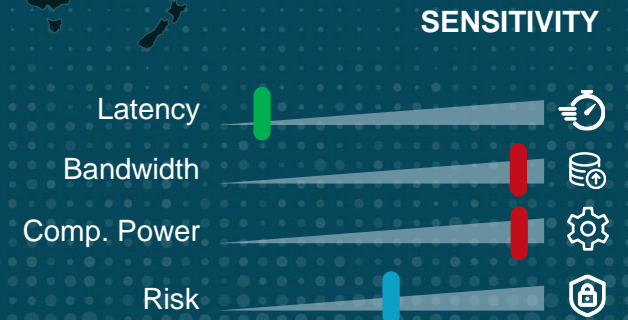

AI Training

requires manageability of multi-cloud data sourcing & computing

Data everywhere.

Computing power somewhere.

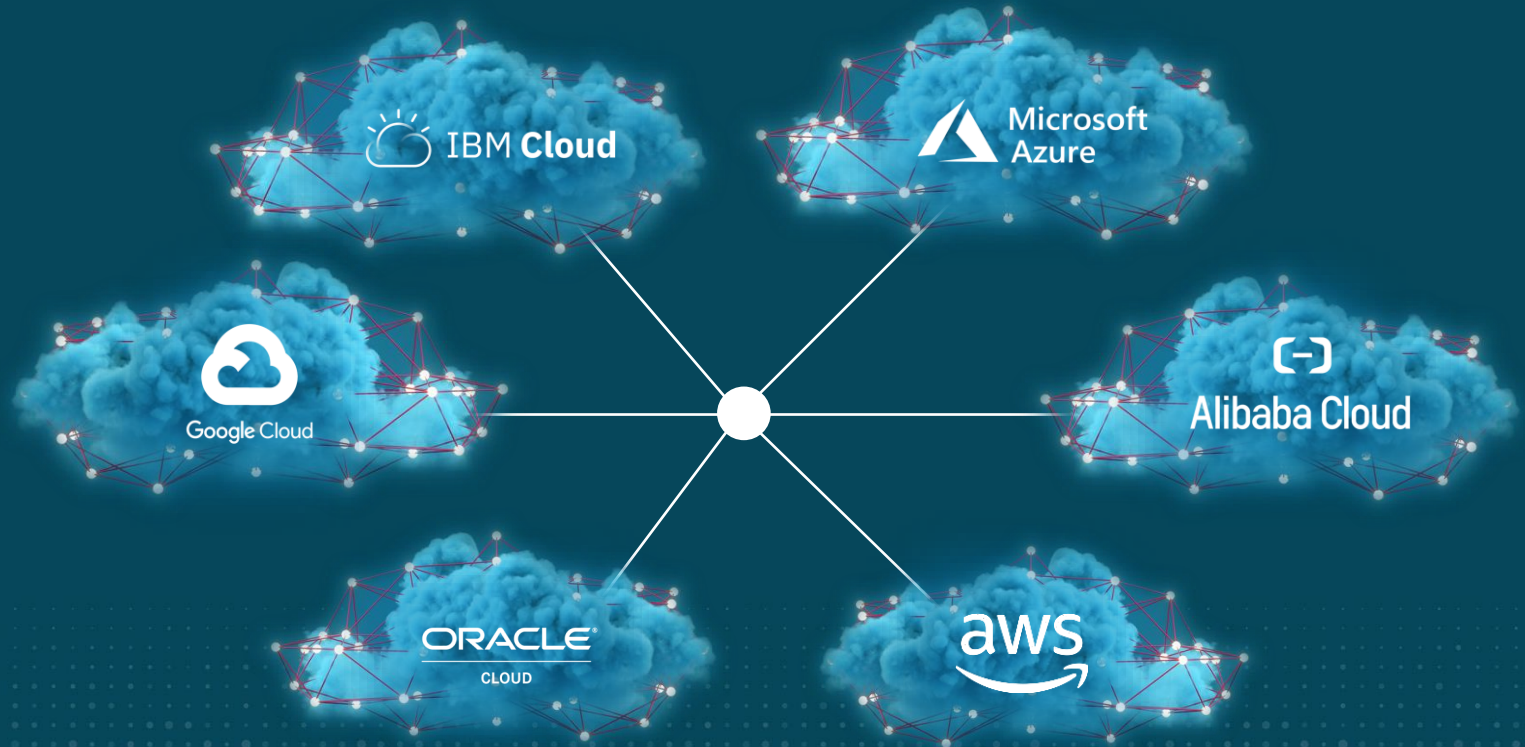

AI Training

requires manageability of multi-cloud data sourcing & computing

**Agile, scalable,
affordable, secure**

- **Single access**
- **Low-risk & low-cost experiment**
- **Data sovereignty & integrity**

**Reaching *all* cloud service providers
with 1 access**

AI Training

requires the interoperability of digital applications

Cloud-to-Cloud
&
Hybrid-Cloud connectivity

AI Training

requires the interoperability of digital applications

Get the data wherever

Direct access to cloud providers,
short data pathways (cloud router)

Get the computing power somewhere

Direct connectivity to hyperscalers for AI training

SENSITIVITY

Latency

Bandwidth

Comp. Power

Risk

CONTROL THE DATA JOURNEY

PERFORMANCE

AI Inference Triangle

AI Inference

requires manageability of multi-AI models

Multi-AI models.
At the speed of human perception. Anywhere.

AI Inference

requires manageability of multi-AI models

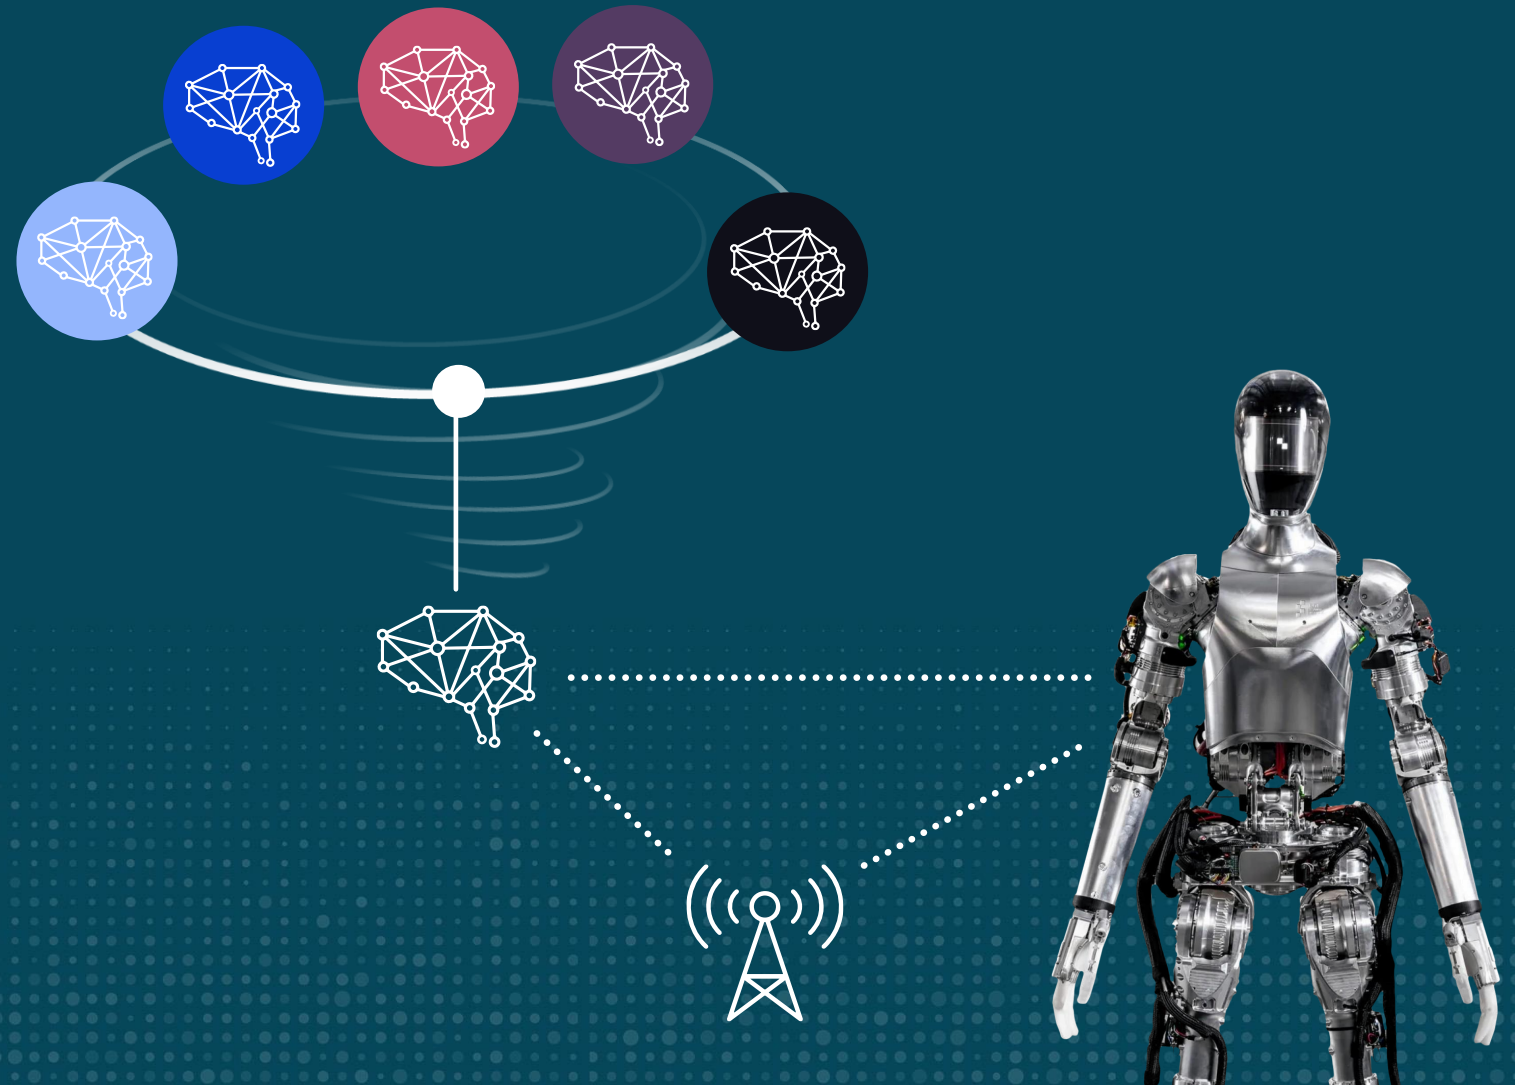

Synchronize multi-AI models
Interoperability, towards real time

AI Inference

requires AI exchanges operating multi-AI models

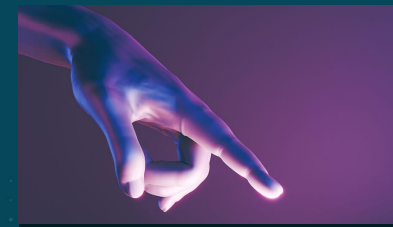

AI Inference requires the speed of human perception

0.5 ms

13 ms

20 ms

Standard applications
65 ms

Towards
real time

< 1 ms
< 80 km

< 13 ms
< 1,200 km

< 20 ms
< 1,800 km

< 65 ms
< 5,200 km

AI Inference requires the speed of human perception

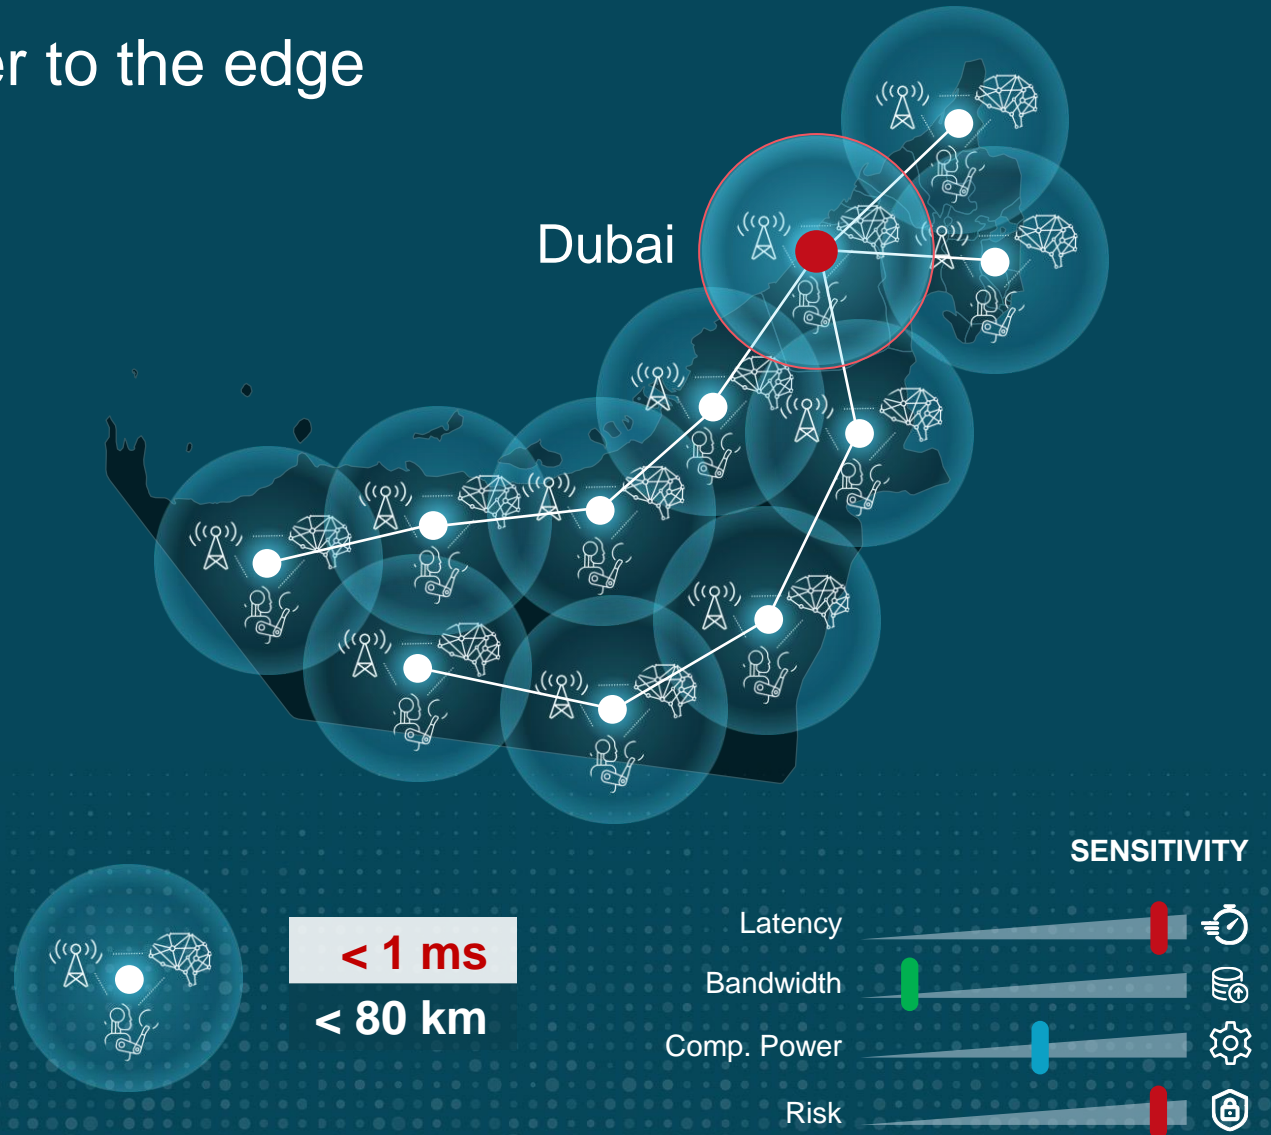

AI Inference

requires an infrastructure closer to the edge

Get the speed & reach: XXS Everywhere

- Hyper-localization & distribution of the AI Infrastructure
- Operated by AI exchanges
- Integration with all other close IXs and AI exchanges
- Integration of latest technologies (AI exchanges powered by AI!)

AI Inference

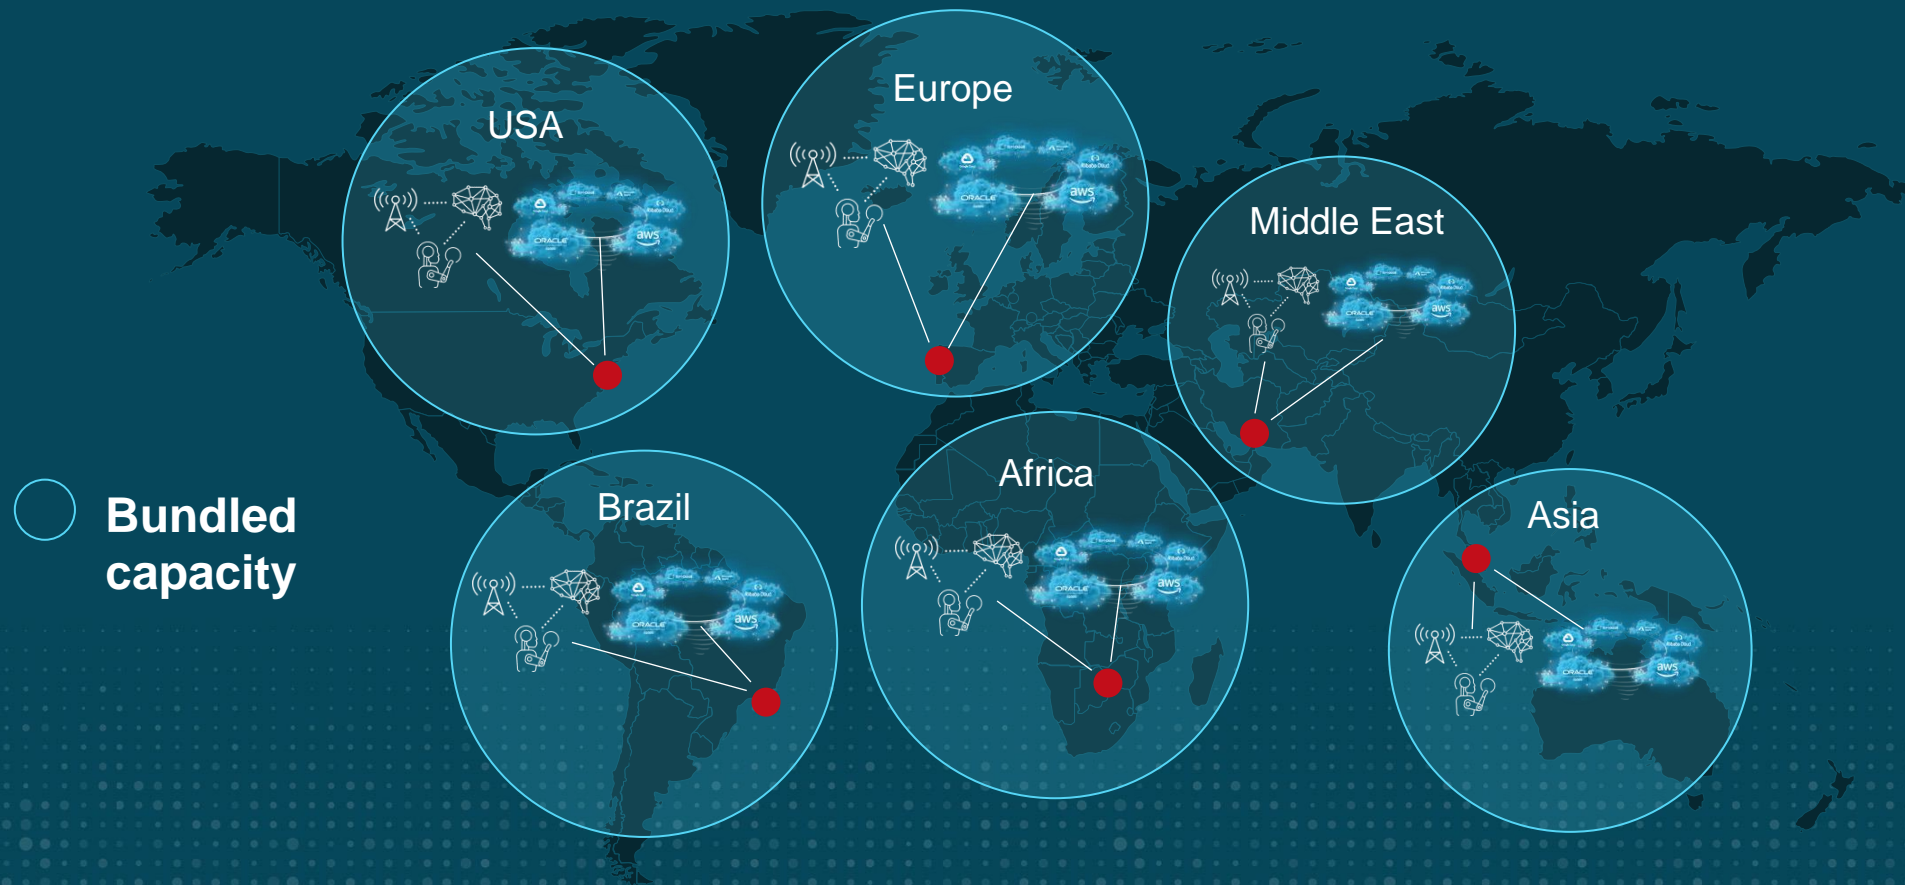

requires integration into the corporate ecosystem

Wherever end-users & corporate operations are

AI Inference

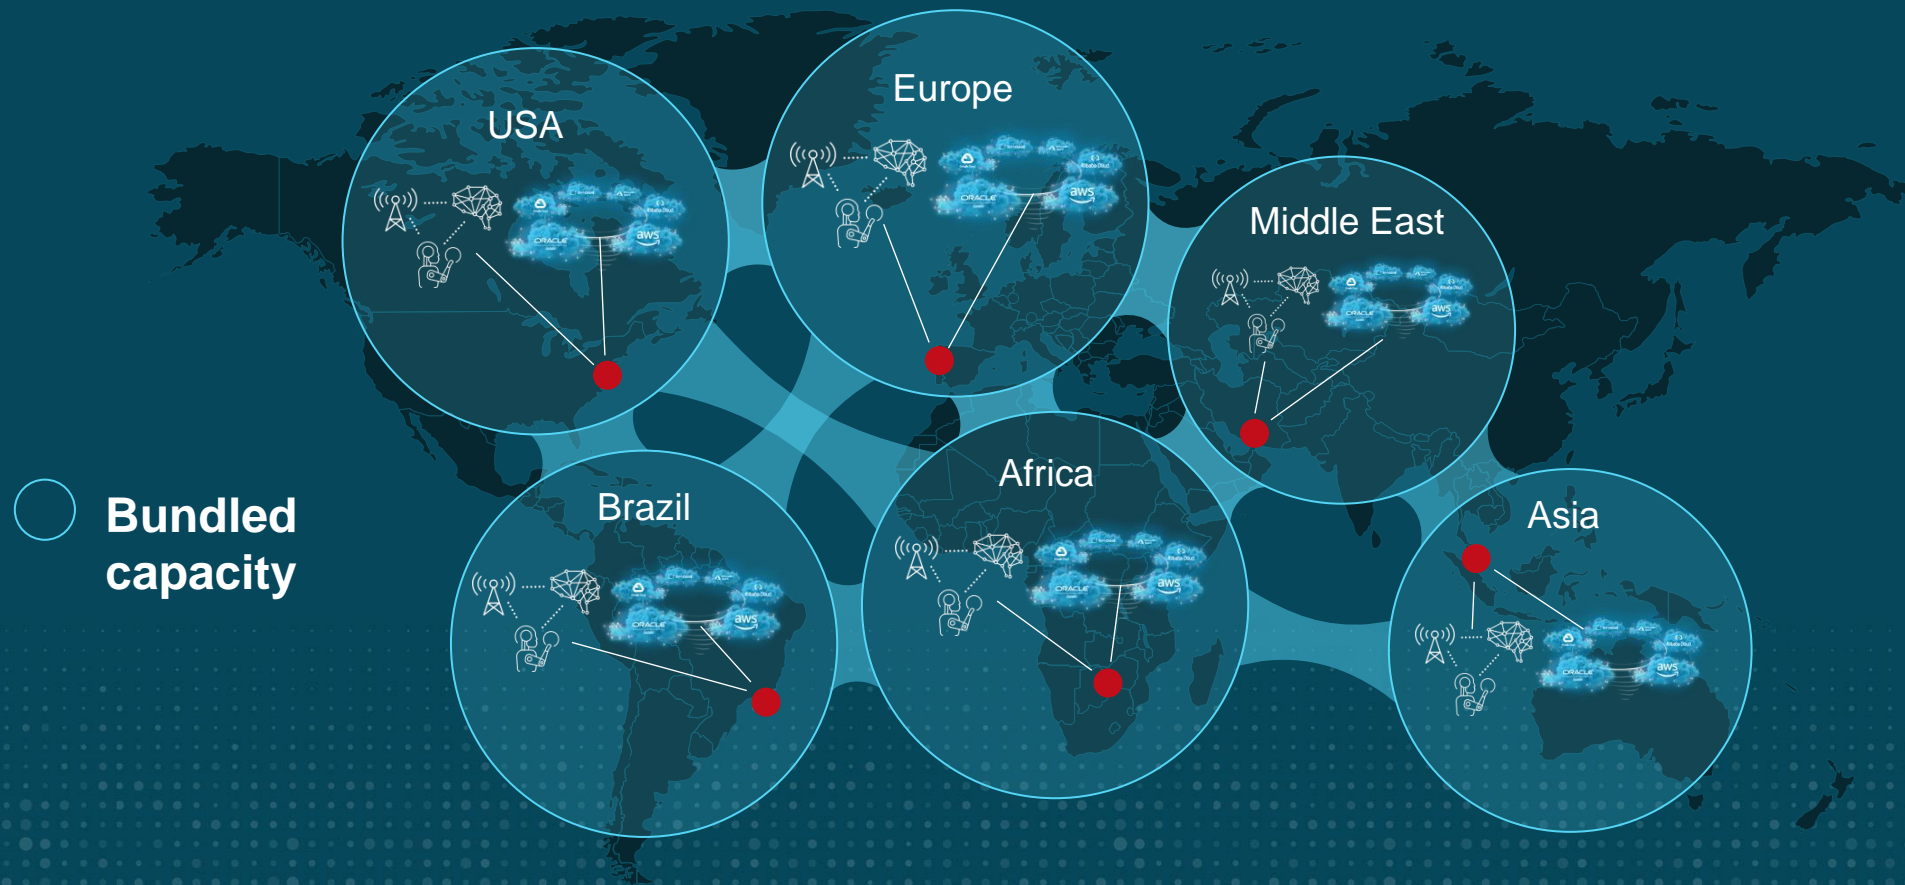

requires integration into the corporate ecosystem

Build your own ecosystem – Control the end-to-end data journey, everywhere.

Data center & carrier neutral | Multi-locations, glocal | Bundled capacity | Multi-cloud

AI Inference requires integration into the corporate ecosystem

Build your own ecosystem – Control the end-to-end data journey, everywhere.

Data center & carrier neutral | Multi-locations, glocal | Bundled capacity | Multi-cloud

Build your own ecosystem – Control the end-to-end data journey, everywhere.
Data center & carrier neutral | Multi-locations, glocal | Bundled capacity | Multi-cloud

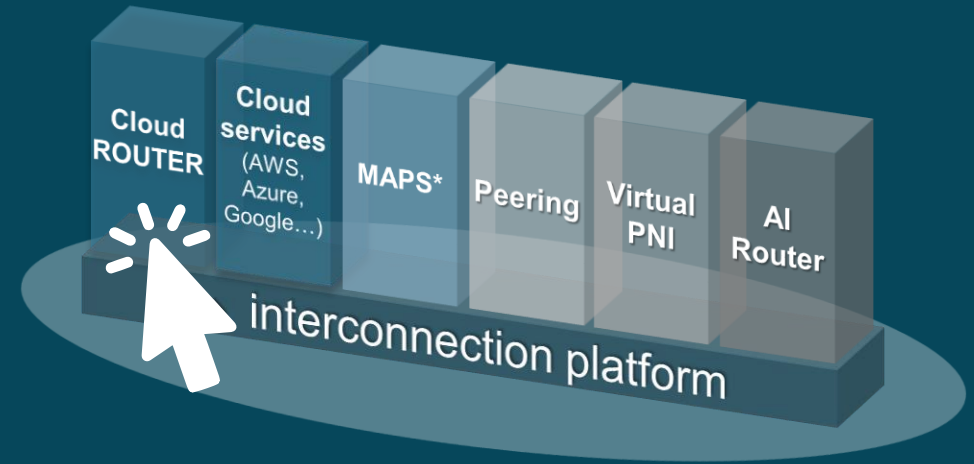

**Self-service management...
at a mouse-click**

- ☑ **Control** of the end-to-end journey of your data: **security & compliance**
- ☑ **Independent & secure infrastructure**

Build your own ecosystem – Control the end-to-end data journey, everywhere.
Data center & carrier neutral | Multi-locations, glocal | Bundled capacity | Multi-cloud

**Self-service management...
at a mouse-click**

- ☑ **Control of the end-to-end journey of your data: security & compliance**
- ☑ **Independent & secure infrastructure**
